

**APPLICATION FOR IMPORTATION OF EQUINE SEMEN TO STATE OF QATAR**

Exporting Country:  
Competent Authority:

**I. INFORMATION CONCERNING THE DONOR STALLION**

| Stallion Name | Microchip/Passport name | Species | Breed | Age |
|---------------|-------------------------|---------|-------|-----|
|               |                         |         |       |     |

If no passport or microchip number is supplied then a copy of the horses identification document or silhouette should accompany this certificate

Name and address of Stallion Owner:

**II. TRANSPORTATION OF THE SEMEN**

Name and address of exporter / consignor:

Name and address of consignee:

Means of transportation (Flight No., date etc):

**III. PLACE OF COLLECTION OF THE SEMEN**

Name and address of approved Semen Collection Centre where semen was collected:

Registration number of approved Semen Collection Centre:

Name and address of officially approved Semen Storage Centre (if not stored at Collection Centre):

Registration number of officially approved Semen Storage Centre:

**IV. INFORMATION CONCERNING THE SEMEN**

Fresh / Chilled / Frozen:

(delete as necessary)

Date(s) of collection:

Number of containers :

Identification numbers on flask including code on uniquely numbered tamper-proof seal.

Identification numbers on straws:

V. **HEALTH INFORMATION RELATING TO THE DONOR STALLION, DIAGNOSTIC TESTS AND STORAGE OF SEMEN**

I, the undersigned, certify that the horse described above meets the following requirements :

- 1- The semen has been collected at an equine semen collection center approved by veterinary authority of Exporting country to collect semen for export and is regularly inspected by an official veterinarian , Approval number:.....
- 2- Exporting country is officially free from Dourine and African Horse Sickness.
- 3- All equipment used to collect, process, and ship of semen was new or had been cleaned and disinfected under the supervision of the center veterinarian prior to use.
- 4- The source of Egg product used in semen extenders should be free from any infectious or contagious diseases .
- 5- Milk products used in the semen extenders was sourced in exporting country from animal of exporting country origin.
- 6- The Semen described above was collected from a donor stallion, which;
  - i) on the day of admission to the Semen Collection Centre showed no clinical signs of infectious disease and based on a written declaration from the owner, had not been in contact with equidae suffering from an infectious or contagious disease in the 15 days prior to admission.
  - ii) on the day of the Semen collection, did not show clinical signs of an infectious or contagious disease.
  - iii) during at least 30 days prior to entry to the Collection Centre and during the collection period was not used for natural service.
  - iv) during the last 30 days prior to collection of the Semen had been kept on holdings where no equidae showed clinical signs of Equine Viral Arteritis.
  - v) during the last 60 days prior to collection of the Semen had been kept on holdings where no equidae showed clinical sings of Contagious Equine Metrities.
  - vi) It has not been in contact with equidae suffering from an infectious or contagious disease during the 15 days immediately preceding the collection of semen.
- 7- In the case of frozen semen, the donor stallion was continuously resident on the Collection Centre for at least 30 days immediately prior to the Semen collection and during the collection period. During that time no equidae on the center came into direct contact with equidae of lower health status than the donor stallion.
- 8- In the case of frozen Semen, the Semen was frozen and stored for a period of at least 30 days immediately following collection in facilities approved by veterinary authority of the Exporting country.
- 9- In the case of frozen Semen, on ..... (date), being at least 14 days after and no more than 30 days after the collection of Semen or the end of the collection period, a blood sample was taken from the above mentioned horse(s) and sent to a laboratory recognized by veterinary authority of the exporting country where it was submitted to the agar gel immune diffusion (Coggins) test for Equine Infectious Anaemia with a negative result.
- 10- In the case of frozen Semen, on ..... (date), being at least 14 days after but no more than 30 days after the collection of Semen or the end of the collection period, a blood sample / entire Semen

sample was taken from the above mentioned horse(s) and sent to a laboratory recognized by veterinary authority of the exporting country where it was submitted to the following test; EITHER

- i) the serum NT for Equine Viral Arteritis with a negative result at a dilution of 1 in 4. OR;
- ii) the virus isolation test for Equine Viral Arteritis with a negative result on an aliquot of the entire Semen.

11- In the case of frozen Semen, on .....(date) and on ..... (date), both dates being at least 14 days but no more than 30 days after the collection of the Semen, and both dates being at least 7 apart, samples of pre-ejaculatory fluid or semen; and swabs from the penile sheath, urethra and the urethral fossa were collected from the said stallion and submitted to a laboratory recognized by the veterinary authority of exporting country for bacteriological culture for Contagious Equine Metrities with negative results in all cases.

12- the Semen described above was collected, processed, stored and transported under conditions which comply with the requirements of Chapter III of Annex D of Directive 92/65/EEC
