

According to the provisions of the Regulation on Veterinary Controls at the Entry of Products into the Country published in the Official Gazette dated 17.12.2011 and numbered 28145, products subject to veterinary checks must be subjected to official controls by the veterinary border control point authorities.

The products subject to veterinary controls at the veterinary border control points at the entry into the country are defined in accordance with the scope of the Regulation on Animals and Products Subject to Veterinary Controls at the Entry into the Country published in the Official Gazette dated 21.12.2011 and numbered 28149, and documents such as ingredient certificate and percentage component list are required for such determination.

It is stated that some of our veterinary border control point authorities doubt the veracity of the documents such as the content document and percentage component list submitted for the purpose of considering whether a product, especially composite products for human consumption and feed for animal feeding, is subject to veterinary controls upon entry into the country.

For this particular reason, in order to ensure that shipments, especially composite products for human consumption and feed for animal feeding, which will enter our country, are subject to veterinary controls, it has been informed to the relevant countries to send documents such as the content document, percentage component list and product batch / lot number, which are the basis for the determination of whether the product is subject to veterinary checks, from the electronic mail of the manufacturer company to the electronic mail of the veterinary border control point directorate / authorised provincial agriculture and forestry directorate where the shipment will enter from the electronic mail of the manufacturer company. Details regarding the application in question are given below:

- 1- The application will be started as of the receipt of the aforementioned notification.
- 2- Content document / percentage component list; It is a document indicating the raw materials, additives and other substances used in the production or preparation of products subject to veterinary checks consisting of more than one component / mixture, including their quantities as a percentage, and the sample is included in Annex-1.
- 3- The implementation in question is for products containing animal products, especially composite products for human consumption and feeds for animal feeding, which are likely to be subject to veterinary checks upon entry into the country. For a guidance, the list showing the customs tariff position numbers of these products, which are likely to be subject to veterinary checks upon entry into the country containing animal products, is given in Annex-2.
- 4- Electronic mail (such as an email with a manufacturer's extension) by the manufacturer company; it will be sent to the electronic mail of the veterinary border control point directorate / authorised provincial directorate of agriculture and forestry in Annex-3 According to the destination where the consignment will enter the country before the arrival of the consignment to the country without any difference in the time of sending the email according to the product.
- 5- It should be provided that electronic mail is sent for each shipment, including each shipment of the same product sent at different times.
- 6- Entry into the country is the entry of goods into the Customs Territory of Turkey and free zones, import and transit regime. For this reason, this application should be carried out for the products that are likely to be subject to veterinary checks at entry

into the country, especially composite products for human consumption and feeds for animal feeding, which contain animal products intended to be subjected to the entry, import and transit regime in the Customs Territory of Turkey and free zones.

ANNEX-1

Content document/percentage component list format

Product Name:		Batch/Lot No:	
Name of raw materials, auxiliary materials and additives used in production, etc. (To be listed in decreasing order from most to least)	Percentage Quantity (%)	The origin of the component used (animal, vegetable, synthetic, etc.)	For foods intended for human consumption only, the intended use of the substances used in the production of the food (main ingredient, active ingredient, excipient, additive, aroma, texture, etc.)
TOPLAM:	100		

ANNEX 2

Products containing animal products, especially composite products for human consumption and feeds for animal feeding, which are likely to be subject to veterinary checks upon entry into the country

Tarife Pozisyonu	Açıklama
1517	If it contains animal products.
1518 00 91	If it contains animal products.
